UNDERSTANDING CURRICULUM

Literacy through Cinema

Cinema is an inclusive medium and the right choice of cinema can:

- Build awareness of the world
- Provide every child with the possibility to connect depending on their inclination
- Can help build the cognitive skills by identifying the social and emotional cues

Purpose

Cinema is a powerful medium because it has a high recall value and gives the students an opportunity to connect to different things according to his or her interest. It also exposes the students to imagination, language and the various layers in the movies for example expressions, colours, relationships, body language, etc.

Process

Through the year the students are shown different age appropriate movies. They are accompanied with prompts which enables them to focus on various aspects of the movie. This helps children understand different layers of the story and decode the accent wherever required..

The layers of cinema are many and it is a medium that carries universal morals and messages. It is also the natural way to practice differentiated instruction as you give the opportunity to the students on the basis of his or her interest.
